

PRESS RELEASE

Linxtelecom purchases three I.R.I.S. products

IRIS Powerscan™, IRIS Document™ Server and IRIS Next™ bring easy-reference document management to international telecommunications company

Louvain-la-Neuve, 11 June 2010 – The stock exchange listed company I.R.I.S., (EURONEXT Brussels: IRI), specialized in Intelligent Document Recognition (IDR)¹, Enterprise Content Management (ECM)² and complex infrastructure for Information and Communication Technology (ICT)³, is pleased to announce that it has been **selected by Linxtelecom telecommunications company to implement three solutions in the area of document scanning and document management.**

By purchasing IRIS Powerscan™, IRIS Document™ Server and IRIS Next™, the business is looking to centralise the growing number of documents in a single location whilst making these documents available for consultation in a duly structured manner for easy reference purposes. Moreover, by setting up this implementation, Linxtelecom intends to make document management safer.

Linxtelecom is an international telecommunications and datacentre services provider with a marked focus on Central and Eastern Europe. Headquartered in Amsterdam, the business was founded in late 2000. In recent years, the company has experienced such overwhelming growth that, in addition to its Dutch offices, local branches have been set up in a wide number of other European countries.

“It was not just the business that was growing. The number of documents in our company has boomed exponentially too. As a result, we urgently needed to put in place structure, organisation and ensure the safe management of all our documents”, explains Manuel Greep, Linxtelecom’s Director of Information Systems. “IRIS Powerscan and IRIS Document Server will enable us to scan the documents, which are subsequently recognised, indexed and archived. The documents are being stored in a single central location, giving everybody direct access, regardless of where he or she is. Obviously, this is a particularly practical solution for an organisation that has a host of branch offices

¹ **IDR (Intelligent Document Recognition)**: automatic recognition of the content of structured (forms) or non-structured documents (incoming post, invoices etc.)

² **ECM (Enterprise Content Management)**: acronym for the technologies relating to electronic content management.

³ **Optimized IT infrastructure**: “best-in-class” architecture for servers and digital storage, including consolidation and virtualization

across Europe. In addition, IRISNext brings full document management facilities which will enable us to make documents available only to designated teams or team members. This too will serve to raise the level of document safety.”

Greep points out the benefits Linxtelecom sees in the I.R.I.S. solutions: “We decided to go with these solutions, because I.R.I.S. offered the best value. In addition, the tools are very user-friendly and I.R.I.S. operates in the same time zone as Linxtelecom, which is an added practical convenience, for example for the helpdesk.” Moreover, Greep is eager to highlight how well the collaboration with I.R.I.S. has been going so far: “I.R.I.S. is a professional company to work with. What is more, they have a very solid understanding of the type of organisation they are dealing with, which means we are not expected to get unduly involved in the technical side of things. A very comfortable way of doing business.”

Dries Aussems, Business Development Manager at I.R.I.S. in the Netherlands is particularly pleased with the selection by Linxtelecom: “We are delighted with the fact that Linxtelecom opted for I.R.I.S. solutions, and are looking forward to implement them. We are confident that IRIS Powerscan, IRIS Document Server and IRISNext will provide Linxtelecom with safe, structured and well-organised digital document management.”

About I.R.I.S.

The mission of I.R.I.S. to increase the productivity and know-how of its clients by helping them better manage their documents, data and information.

I.R.I.S. Products & Technologies develop technologies and products within the field of Intelligent Document Recognition and commercialize the product portfolio worldwide through strong partnerships.

I.R.I.S. Professional Solutions offer companies and governments the chance of finding in one single company innovating know-how and cutting-edge technology for the effective management of their documents, data flows and information infrastructure.
